Name : Bhange Nikita

Div : A Class : FY-MCA

Roll no : 2501019 Subject : Full stack Assignment 2

Create an **Employee Management API** using **Express.js**. The employee information should be stored in a **JSON format**

1. Use **Express.js** to create the server.
2. Accept and return data in **JSON format**.
3. The API should allow users to **add, read, update, and delete employee records**.
4. Return proper **error messages** if an employee is not found.
5. API Endpoints to Implement

Testing on POSTMAN

Method	**Url**	**Description**
GET	/employees	Get all employees
GET	/employees/:id	Get employee by ID
POST	/employees	Add a new employee
PUT	/employees/:id	Update employee details
DELETE	/employees/:id	Delete an employee

Code:
```
const express = require('express');
const app  = express()
const port = 3000

app.use(express.json())
let employees = [
{ id: 1, name: "Nikita", role: "Developer" },
```

```
{ id: 2, name: "chirag", role: "Designer" }
];

app.listen(port, () => {
   console.log(`Server is running on http://localhost:${port}`);
});

//GET All Employees
app.get('/employees', (req, res) => {
res.json(employees);
});

//GET Employee by ID
app.get('/employees/:id', (req, res) => {
const emp = employees.find(e => e.id == req.params.id);
if (!emp) {
return res.status(404).json({ message: "Employee not found" });
}
res.json(emp);
});

//add employee with post method
app.post('/employees',(req,res)=>{
   const {name,role}=req.body;
   const newEmp = {
      id:employees.length +1,
```

```
      name,
      role
    };
    employees.push(newEmp);
    res.status(201).json(newEmp);
})

//UPDATE Employee (PUT)
app.put('/employees/:id', (req, res) => {
  const emp = employees.find(e => e.id == req.params.id);
  if (!emp) {
    return res.status(404).json({ message: "Employee not found" });
  }
  emp.name = req.body.name || emp.name;
  emp.role = req.body.role || emp.role;
  res.json(emp);
});

//DELETE Employee
app.delete('/employees/:id', (req, res) => {
  const index = employees.findIndex(e => e.id == req.params.id);
  if (index === -1) {
    return res.status(404).json({ message: "Employee not found" });
  }
  employees.splice(index, 1);
```

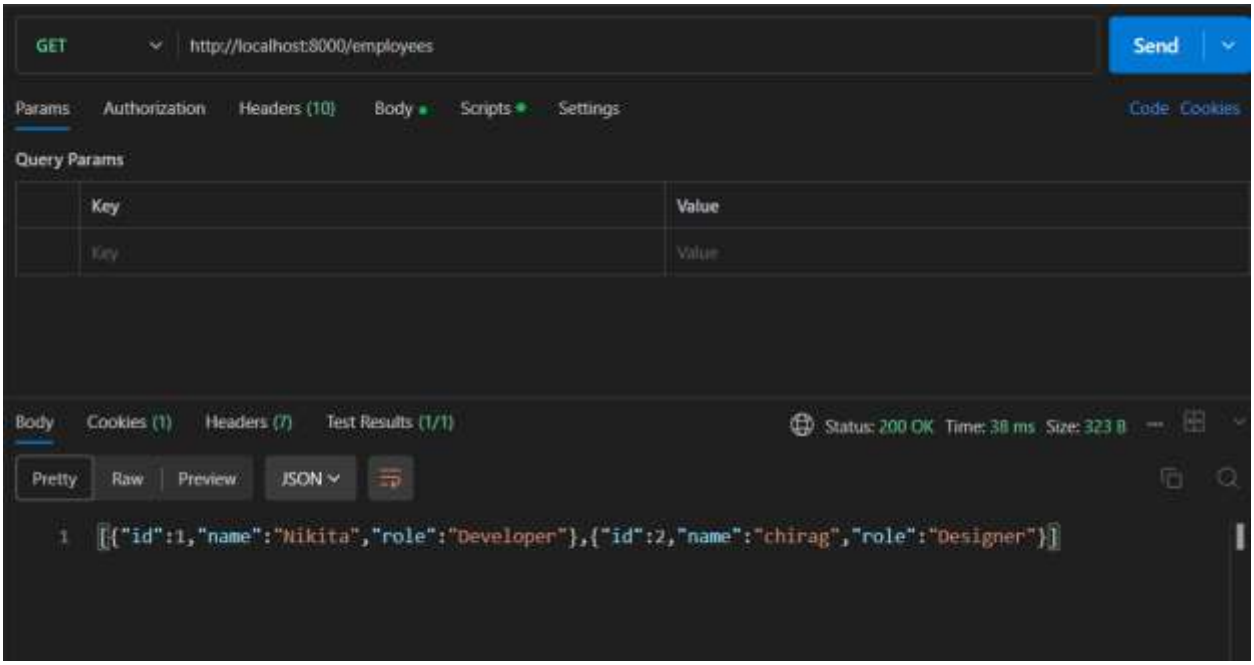
```
  res.json({ message: "Employee deleted" });

});
```

```
PS C:\Users\DELL\Desktop\js> node employee.js
Server is running on http://localhost:8000
```

Testing on POSTMAN

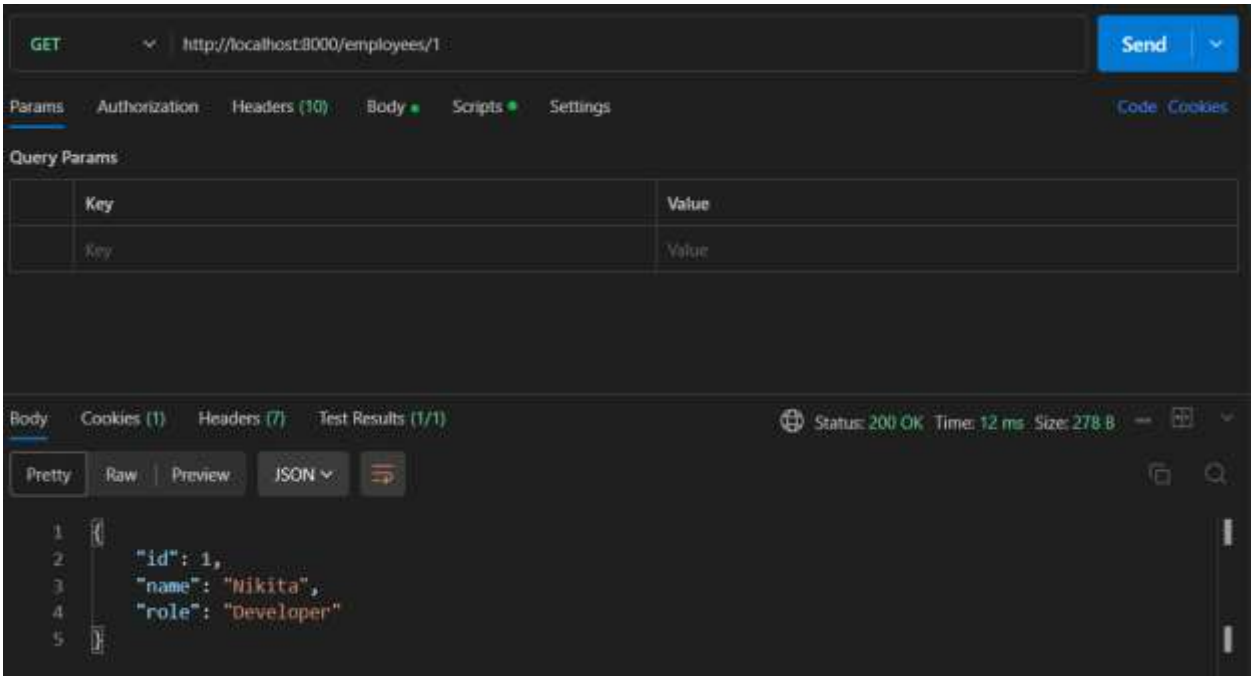
1. Get all employees
2. API : - GET http://localhost:3000/employees



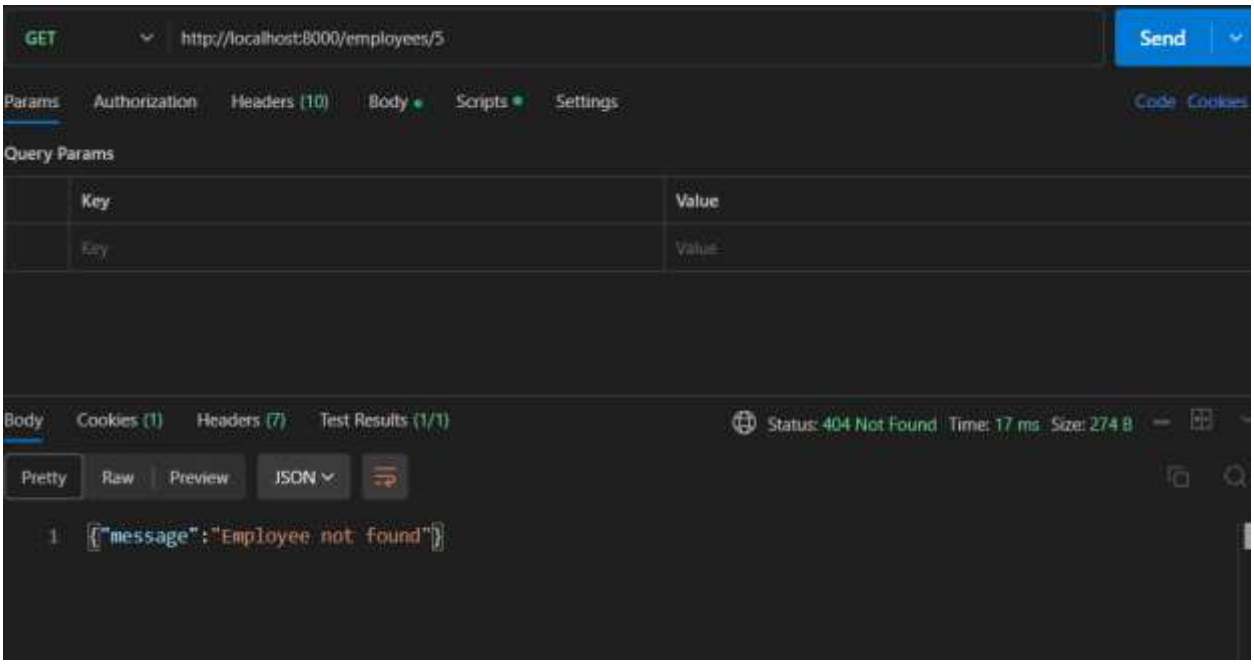
2 . Get employee by ID

API : - GET http://localhost:3000/employees/2

If found

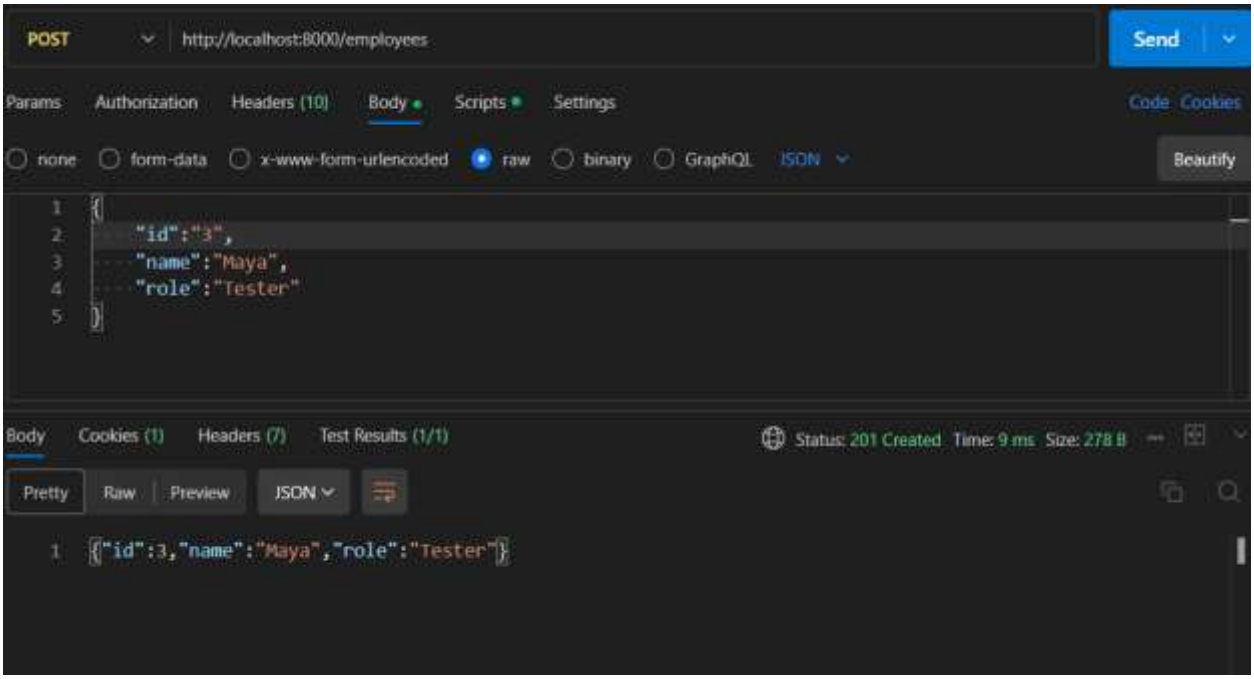


If not found



3 . Add a new employee

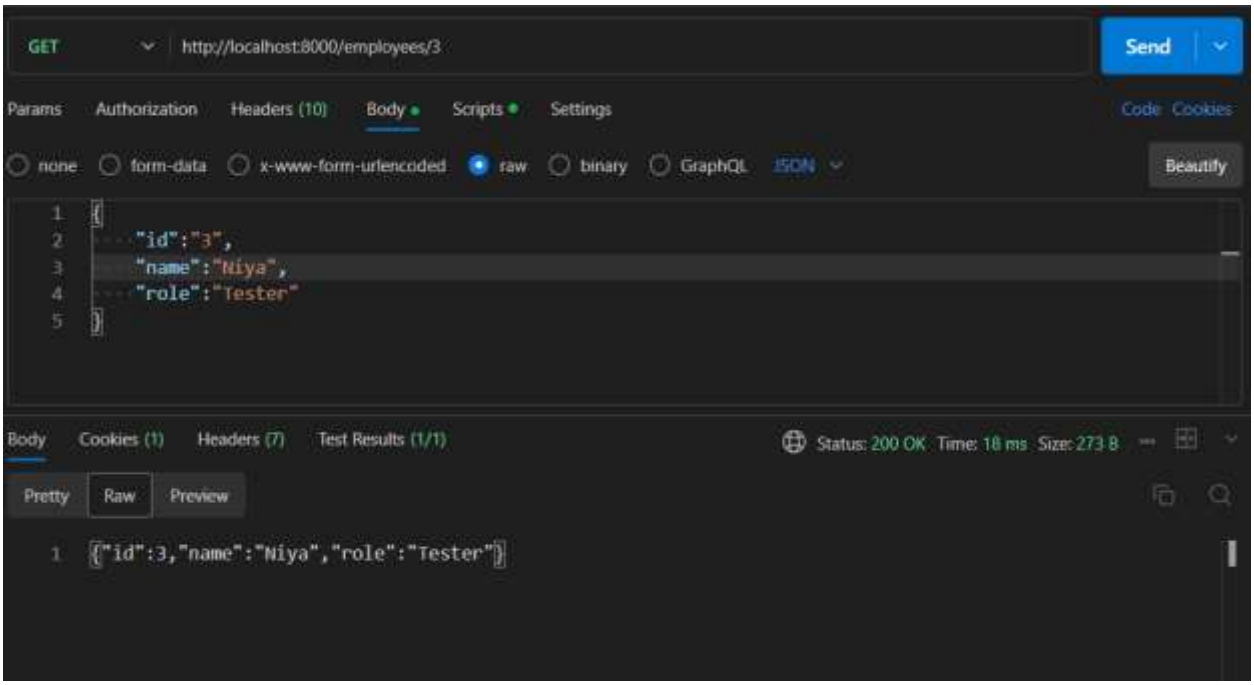
API : - POST http://localhost:3000/employees



4 . Update employee details

API : - PUT http://localhost:3000/employees/3

(Name change from “Maya” to “Niya”)



5 . Delete an employee

API : - DELETE http://localhost:3000/employees/1:

DELETE http://localhost:8000/employees/3 Send
